

## Sale 100 % mulberry leaf powder

The Sericulture Experiment Station, Vratza, Bulgaria sells 100 % mulberry leaf powder.

The mulberry leaf powder is obtained entirely of mulberry leaves, harvested from our own plantations which are under an optimal agrotechnics. The mulberry plantations are completely isolated of possible pollution with agricultural chemicals or any other harmful for the silkworm larvae or the people substances. Therefore the mulberry leaves obtained are entirely ecologically clean.

The leaves are picked up during the period July – September. Only high quality mulberry leaves having high nutritive content and suitable for the silkworm feeding are selected. The mulberry leaves are dried at room temperature aiming at a complete preservation of their nutritive substances. The rooms for drying the leaves have been previously ideally cleaned and disinfected. After the drying the leaves are grinded and the mulberry leaf powder obtained is preserved in cheese cloth bags in a special storage room on shelves with trays having net bottom at air humidity below 65 %, temperature from 5 to 25 ° C and continuous ventilation.

The mulberry leaf powder contains entirely only dried and grinded mulberry leaves without any other additives.

The 100 % mulberry leaf powder is very suitable as an very essential component of silkworm artificial diets as well as for other purposes.

The biochemical composition of the 100 % mulberry leaf powder is as follows:

Crude protein (%)	Crude fats (%)	Crude fibers (%)	Crude ash (%)	Protein extract matter (%)
26.07	3.44	10.89	9.38	51.22

We accept orders for buying 100 % mulberry leaf powder all the year round.
